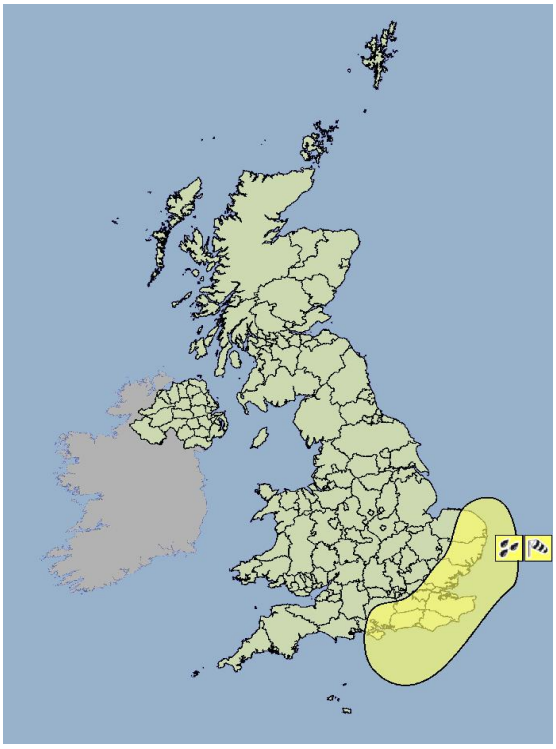
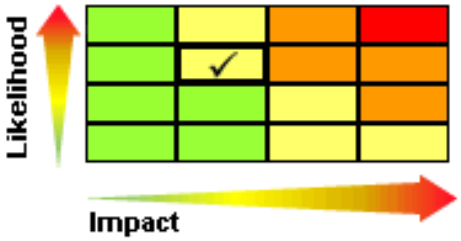
National Severe Weather Warning Service





Chief Forecasters Assessment
Storm Angus was centred over Essex at 0800 hours and will continue to move away quickly eastwards this morning. The strongest of the winds are now over the Strait of Dover and although some strong gusts are still evident further north and west, these will ease through the morning and early afternoon. Remaining heavy rain over East Anglia will soon clear, although some roads may still be affected by surface water flooding after the earlier heavy rain.

The warning has been updated to reflect the conditions from now onwards.

The Met Office have issued a **Yellow Warning** of **Rain and Wind**

Valid from **09:00 on Sun, 20th Nov 2016** until **13:00 on Sun, 20th Nov 2016**

The strongest of the winds and heavy rain associated with Storm Angus are now confined to parts of southeast England (strongest winds in the Amber warning area) and will clear to the east through the rest of this morning, although some gusts of 50 mph may still affect eastern parts of East Anglia and Kent into the early afternoon.

Please remain aware of the risk of difficult driving conditions due to localised surface water flooding and possible debris from trees.
